General Description

Model 265DC detailed in this data sheet apply for those transmitters which include on high pressure measuring side, a direct mount seal which is integral to the transducer by a short capillary connection inside a protective rigid tube.

This construction forms a standalone single assembly suitable to be mounted to the process by the seal mounting facilities.

By properly selecting the high and low pressure side variant in the ordering codes model 265DC can be in the following versions :

- one direct mount seal and one flange for process connection, $\frac{1}{4}$ – 18 NPT direct or $\frac{1}{2}$ – 14 NPT through adapter; this allows also to connect the other leg (wet or dry) for differential measurement.
- one direct mount seal and one remote seal with capillary; the two seals allow again a differential measurement and must be selected of same type/size.

Refer to seal data sheet for all data and details relevant to seal element. The following table list the types of standard seal which can be mounted with 265DC transmitters.

Seal type	Size
Flanged flush diaphragm	2in / DN50 3in / DN80
Flanged extended diaphragm	2in / DN50 3in / DN80

All following specification data apply for identical characteristics of the two seals when the transmitter has the remote seal in addition to the direct mount one.

Output scale 0%	Lower Range Limit (LRL)
Output scale 100%	Upper Range Limit (URL)
Output	Linear
Hi-Hi Limit	Upper Range Limit (URL)
Hi Limit	Upper Range Limit (URL)
Low Limit	Lower Range Limit (LRL)
Low-Low Limit	Lower Range Limit (LRL)
Limits hysteresis	0.5% of output scale
PV filter	0.125s.
Address	126

Any or all the above configurable parameters, including Lower range-value and Upper range-value can be easily changed by a PC, running the configuration software SMART VISION with DTM for 2600T.

The transmitter database is customized with specified flange type and material, o-ring and filling liquid.
