Rosemount™ DP Level Transmitters and 1199 Diaphragm Seal Systems

Applications

- Level, flow, pressure, interface, density
- Extreme hot and cold temperatures
- Corrosive, clogging, or viscous processes
- Hygienic requirements
- Special process connections

EMERSON

Proven, reliable, and innovative DP level technologies

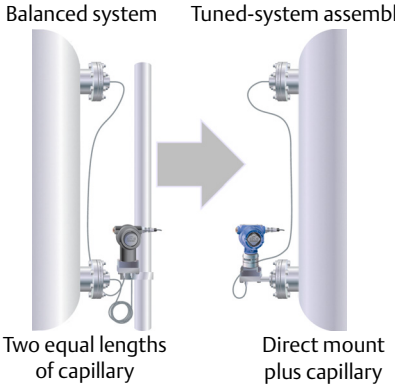
To meet your application requirements, Rosemount DP Level technologies deliver an unsurpassed product offering that is easy to specify, order, and install. The offering includes a wide variety of process connections, direct mount or capillary connections, and materials of construction to address almost any application. If you don't see what you need listed here, ask us. We can create a custom engineered solution to meet your needs.

Rosemount Level Transmitters

Level transmitters combine world-class Rosemount pressure instrumentation with direct-mount seals, all in a single integrated model number.

Rosemount 3051SAL, 3051L, and 2051L Level Transmitters

- Achieve best-in-class system reliability with all welded systems
- Wireless configurations provide new data access
- Connect to virtually any process with a comprehensive offering of process connections, fill fluids, direct mount or capillary connections, and materials
- Quantify and optimize total system performance with QZ option



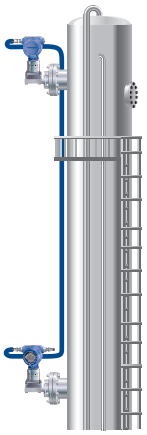
Rosemount Tuned-System™ Assemblies optimize results

- Reduce installed costs by 20 percent by eliminating excess capillary and transmitter mounting hardware
- Improve performance by up to 30 percent
- Increase response time by up to 80 percent
- Reduce risk with up-front quantified performance reports

Contents

Rosemount 3051S Electronic Remote Sensor (ERS)™ System

The Rosemount 3051S ERS System is a digital DP Level architecture that links two Rosemount 3051S Pressure Sensors together electronically. The pressure sensors are synchronized on a single power loop where the differential pressure, level, and volume are calculated and transmitted using a standard two-wire 4–20mA HART® signal.



A digital upgrade to a proven technology

- 90 percent improvement in time response
- Elimination of temperature effects and measurement drift
- Multivariable capabilities including DP, P_{LO}, P_{HI}, volume, and level
- Proven Rosemount 3051S Sensor technology

Simplified installations and maintenance routines

- Elimination of wet legs or dry legs
- Easy installations without need for heat tracing and insulation
- Proactive maintenance and troubleshooting with sensor alerts and diagnostics
- Simplified inventories with sensors and standard cable

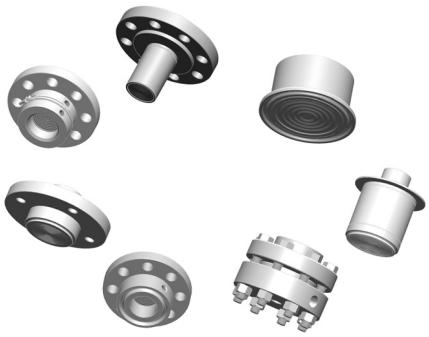
Rosemount 1199 Seal Systems

A seal system consists of a pressure transmitter, one or two seals, a fill fluid, and either a direct mount or capillary style connection. Seal systems provide a reliable process pressure measurement and prevent the process medium from contacting the transmitter diaphragm. Transmitter/diaphragm seal systems should be considered when:

- The process temperature is outside of the operating ranges of the transmitter.
- The process is corrosive and/or requires specific exotic materials of construction.
- The process contains suspended solids or is viscous and is prone to plugging of connections.
- The application requires the use of flush-mount hygienic connections that facilitates CIP/SIP service.
- There is a requirement for easier cleaning of the process from the connections to avoid contamination between batches.

Application flexibility

- Flanged, threaded, and hygienic process connections
- Meets industry standards such as EN 1092-1, ANSI/ASME B16.5, JIS B2238, ANSI/ASME B1.20.1, EN 10226-1, GOST 33259-15, ISO 228-1
- Variety of fill fluids applications including cold temperature, hot temperature, and hygienic and food grade
- Three different capillary diameters allow for optimization of accuracy and time response.



Reliable system construction

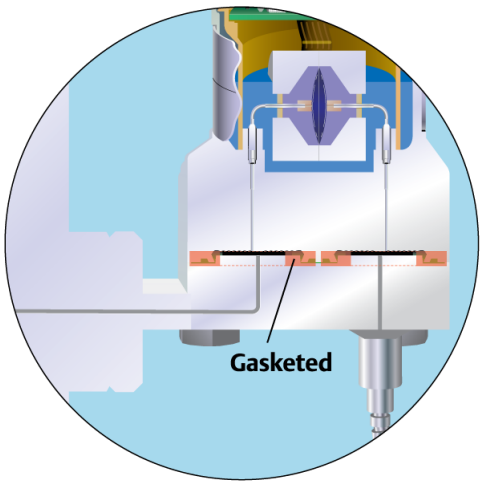
- Welded design with no threaded connections
- 100 percent helium leak tested
- Advanced manufacturing techniques ensure air-free, leak-tight system that is stable over time
- Reliable operation in full vacuum applications

Robust seal design

- Backup convolutions on the diaphragm protect seal integrity.
- Recessed diaphragms reduce potential for handling damage.

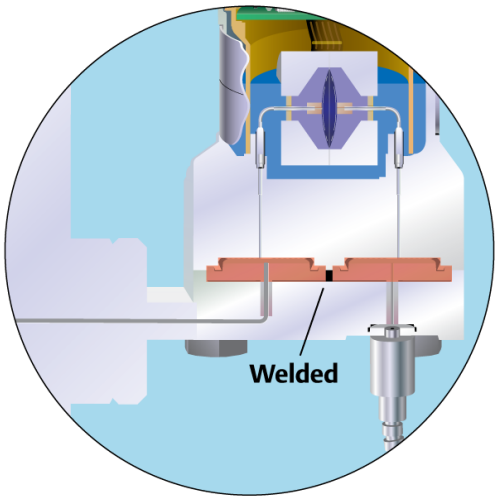
Figure 1. Rosemount Seal System Construction Options

Welded-repairable construction



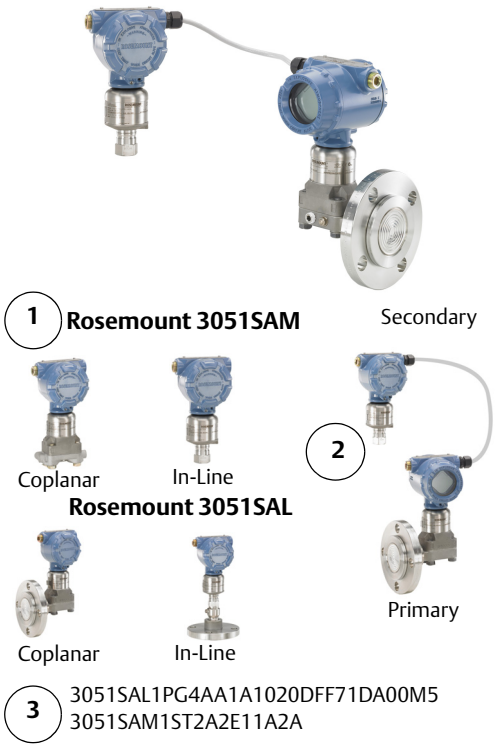
- All connection pointed welded except gasket between sensor module and transmitter flange
- Transmitter can be re-used if repair work is required

All welded (vacuum) construction



- All connection points welded including welded disk over sensor module isolators
- Ideal for vacuum applications (< 6 psia, 400 mbar-a)
- Seal system and transmitter are not repairable

Rosemount 3051S ERS System



The Rosemount 3051S ERS System is a flexible, 2-wire 4–20 mA HART architecture that calculates differential pressure (DP) electronically using two pressure sensors that are linked together with a non-proprietary electrical wire.

Ideal applications for the Rosemount 3051S ERS System include tall vessels and distillation columns that have traditionally required long lengths of capillary or impulse piping. When used in these types of applications, the Rosemount 3051S ERS System can deliver:

- More accurate and repeatable DP measurements
- Faster time response
- Simplified installations
- Reduced maintenance

How to order

1. Select two Rosemount 3051S ERS Transmitter models. These may be any combination of Rosemount 3051SAM and 3051SAL models.
2. Decide which model will be the ERS primary (4–20 mA loop termination and optional LCD display) and which will be the ERS Secondary. This will be specified by the "Configuration Type" code in each model number.
3. Specify two full model numbers per the desired configuration.

Additional information
Specifications: page 126
Certifications: page 142
Dimensional drawings: page 169

Rosemount 3051SAM Transmitter for ERS applications

- Coplanar and in-line sensor module platforms
- Variety of process connections including threaded NPT, flanges, manifolds, and Rosemount 1199 Remote seals
- Available with 15-year stability and 15-year limited warranty

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 136 for more information on material selection.

1. For detailed specifications see "Specifications" on page 126. The Rosemount 3051S ERS System offers three performance class options; classic, ultra, and enhanced ERS system performance. The classic and ultra performance classes are suited to lower static pressure and stable temperature conditions. The enhanced ERS system performance class provides better performance across temperature (–40 to 185 °F) with improved performance at higher static pressure.
2. The pressure range should be specified based on the maximum static pressure, not differential pressure.
3. Materials of construction comply with metallurgical requirements highlighted within NACE MR 0175/ISO 15156 for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR 0103 for sour refining environments. Order with Q15 or Q25 to receive a NACE certificate.
4. Not available with pressure sensor/module codes T or E.
5. Tantalum diaphragm material is only available with pressure sensor/module code G.
6. "Assemble to" items are specified separately and require a completed model number.
7. Consult an Emerson™ representative for performance specifications.
8. Maximum cable distance for SIS installations. See Rosemount 3051S ERS Reference Manual for more information.
9. Maximum cable distance for IS (Intrinsically safe) installations. Other options may not be valid at longer distances.
10. Not available with configuration type code S.
11. Not available with process connection code A11.
12. This assembly is included with options E1, N1, K1, ND, E4, E7, N7, K7, E2, KA, KC, KD, K2, T1, EP, and KP.
13. Not available with M20 or G $^1/_2$ conduit entry size.

14. Q16 is only available when the diaphragm seal has surface finish options.
15. The QZ report quantifies the performance of the entire ERS system. One report is provided per ERS system. The QZ option is specified on the primary transmitter (configuration type code P).
16. Silicone fill fluid is standard.
17. See the Rosemount 3051S Reference Manual for cable requirements. Contact an Emerson representative for additional information.

Rosemount 3051SAL Transmitter for ERS applications

- Integrated transmitter and direct mount diaphragm seal system in a single model number
- Variety of process connections including flanged, threaded, and hygienic remote seals
- Available with 15-year limited warranty

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 136 for more information on material selection.

A Rosemount 3051SAL Scalable ERS Level Transmitter consists of three parts. First, specify the transmitter model codes found on page 14. Then, specify a direct mount seal found on page 69. Finish the model number by specifying all desired options on page 18.

1. For detailed specifications see "Specifications" on page 126. The Rosemount 3051S ERS System offer three performance class options; classic, ultra, and enhanced ERS system performance. The classic and ultra performance classes are suited to lower static pressure and stable temperature conditions. The enhanced ERS system performance class provides better performance across temperature (–40 to 185 °F) with improved performance at higher static pressure.
2. Not suitable for vacuum applications.
3. Maximum working pressure (MWP) of the Thermal Optimizer is 4000 psi (275 bar).
4. Maximum working pressure (MWP) of the thermal range expander is 3750 psi (258,6 bar).
5. Thermal range expander with Syltherm XLT secondary fill fluid is not recommended for use in vacuum applications below 6 psia (400 mbar-a).
6. At ambient pressure of 14.7 psia (1 bar-a) and ambient temperature of 70 °F (21 °C). Temperature limits are reduced in vacuum service and may be limited by seal selection.
7. Due to heat transfer to the transmitter, the maximum process temperature of the transmitter will be de-rated if ambient or process temperatures exceed 185 °F (85 °C). Consult Instrument Toolkit to verify the application.
8. For complete process and ambient temperature limits, see thermal range expander temperature operating range on page 135.
9. This is a food grade fill fluid.
10. Not suitable for vacuum applications.
11. Only available with thermal range expander.
12. The pressure range should be specified based on the maximum static pressure, not differential pressure.
13. Maximum cable distance for SIS installations. See Rosemount 3051S ERS Reference Manual for more information.
14. Maximum cable distance for IS (Intrinsically safe) installations. Other options may not be valid at longer distances.
15. Not available with configuration type code S.
16. This assembly is included with options EP, KP, E1, N1, K1, ND, E4, E7, N7, K7, E2, KA, KC, KD, K2, T1, E3, EM, KM.
17. Not available with M20 or $G^1/_2$ conduit entry size.
18. Silicone fill fluid is standard.
19. See the Rosemount 3051S Reference Manual for cable requirements. Contact an Emerson representative for additional information.
20. The QZ report quantifies the performance of the entire ERS system. One report is provided per ERS system. The QZ option is specified on the primary transmitter (configuration type code P).
21. Materials of construction comply with metallurgical requirements highlighted within NACE MR 0175/ISO 15156 for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR 0103 for sour refining environments.

Rosemount 3051S Scalable™ Level Transmitter

Rosemount 3051SAL In-Line with "FF" Flanged Seal

Rosemount 30 51SAL Coplanar™ with "SS" Hygienic Tank Spud Seal

Rosemount 3051SAL Tuned-System Assembly with Thermal Range Expander

Rosemount 3051SAL Balanced System

Rosemount 3051S Level Transmitters combine the features and benefits of a high-performance Rosemount 3051S Pressure Transmitter with the durability and reliability of diaphragm seals all in a single model number.

Product features and capabilities include:

- Variety of process connections including flanged, threaded, and hygienic seals
- Quantified performance for the entire transmitter/seal assembly (QZ option)
- HART, FOUNDATION™ Fieldbus, and wireless Protocols

Additional information

Specifications: page 126
Certifications: page 142
Dimensional drawings: page 169

Rosemount 3051SAL Scalable Level Transmitter

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 136 for more information on material selection.

A Rosemount 3051SAL Scalable Level Transmitter consists of three parts. First, specify the transmitter model codes found on page 22.
Then, specify a direct mount seal found on page 69. Finish the model number by specifying all desired options on page 30.

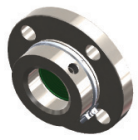
Pressure testing		
P1	Hydrostatic testing with certificate	
Special cleaning		
P2	Cleaning for special services	
P3	Cleaning for less than 1PPM chlorine/fluorine	
Calibration certification		
Q4	Calibration certificate	★
QP	Calibration certificate and tamper evident seal	★
Material traceability certification		
Q8	Material traceability certification per EN 10204 3.1	★
Quality certification for safety		
QS[20][23]	Prior-use certificate of FMEDA Data	★
QT[35]	Safety-certified to IEC 61508 with certificate of FMEDA data	★
Toolkit performance reports		
QZ	Remote seal system performance calculation report	★
Transient protection[36][37]		
T1	Transient terminal block	★
Conduit electrical connector[38]		
GE	M12, 4-pin, male connector (eurofast®)	★
GM	A size Mini, 4-pin, male connector (minifast®)	★
NACE certificate[31]		
Q15	Certificate of Compliance to NACE MR0175/ISO 15156 for wetted materials	★
Q25	Certificate of Compliance to NACE MR0103 for wetted materials	★
Typical model number: 3051SAL 1 C G 2A A 1A 10 20 D FF G 1 DA 0 0		

1. For detailed specifications see "Specifications" on page 126. The Rosemount 3051S ERS System offers three performance class options; classic, ultra, and enhanced ERS system performance. The classic and ultra performance classes are suited to lower static pressure and stable temperature conditions. The enhanced ERS system performance class provides better performance across temperature (–40 to 185 °F) with improved performance at higher static pressure.
2. Requires Plantweb housing.
3. Only intrinsically safe approval codes apply.
4. Only available with output code X.
5. Available with output code A only. Available approvals are FM Intrinsically Safe; Nonincendive (option code I5), CSA Intrinsically Safe (option code I6), ATEX Intrinsic Safety (option code I1), or IECEx Intrinsic Safety (option code I7). Contact an Emerson Process Management representative for additional information.
6. Low side seal identical to high side seal.
7. Maximum working pressure is 4000 psi (275 bar).

8. MWP of the thermal range expander is 3750 psi (258,6 bar).
9. Requires separate Rosemount 1199 model number to be selected. With option code 1, user must select Seal Location Option code M (low side of transmitter) in the Rosemount 1199 Remote Mount Seal System Model.
10. Not suitable for vacuum applications.
11. PVC coating should not be exposed to temperatures above 212 °F (100 °C) to avoid possibility of thermal breakdown.
12. Capillary length applies to both high and low side for balanced systems. Applies to low side only for tuned-system assemblies. Applies to high side only for remote mount single seal systems with capillary.
13. At ambient pressure of 14.7 psia (1 bar-a) and ambient temperature of 70 °F (21 °C). Temperature limits are reduced in vacuum service and may be limited by seal selection.
14. Due to heat transfer to the transmitter, the maximum process temperature of the transmitter will be de-rated if ambient or process temperatures exceed 185 °F (85 °C). Consult Instrument Toolkit to verify the application.
15. For complete process and ambient temperature limits, see "Thermal Range Expander Temperature Operating Range" on page 135.
16. Only available with thermal range expander.
17. This is a food grade fill fluid.
18. Long-life power module must be shipped separately, order power module 701PBKKF.
19. Not available with output code A.
20. Not available with output code X.
21. With option code 10, user must select seal location option code M in Table 18 on page 76.
22. Requires Plantweb housing and output code A. Includes hardware adjustments as standard.
23. Not available with output code F.
24. Not available with housing style codes 2E, 2F, 2G, 2M, 5A, 5J, or 7J.
25. This assembly is included with options EP, KP, E1, N1, K1, ND, E4, E7, N7, K7, E2, E3, KA, KC, KD. IA, IB, IE. IF, IG, K2, T1, EM, and KM.
26. Transmitter is shipped with 316 SST conduit plug (uninstalled) in place of carbon steel conduit plug.
27. Valid when SuperModule™ Platform and housing have equivalent approvals.
28. Not available with M20 or G $^1/_2$ conduit entry size.
29. Requires Plantweb housing and hardware adjustments option code D1. Limited availability depending on transmitter type and range. Contact an Emerson representative for additional information.
30. Silicone fill fluid is standard.
31. Materials of construction comply with metallurgical requirements highlighted within NACE MR0175/ISO 15156 for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR0103 for sour refining environments. Order with Q15 or Q25 to receive a NACE certificate.
32. Not available with housing code 01 or 7J.
33. Not available with output code F, option code DA2, or option code QT.
34. See the Rosemount 3051S Reference Manual for cable requirements. Contact an Emerson representative for additional information.
35. Not available with output code F or X. Not available with housing code 7J.
36. The T1 option is not needed with FISCO Product Certifications; transient protection is included in the FISCO product certification codes IA, IB, IE, IF, and IG.
37. Not available with Housing code 5A, 5J, or 7J.
38. Not available with Housing code 5A, 5J, or 7J. Available with Intrinsically Safe approvals only. For FM Intrinsically Safe; Nonincendive (option code I5) or FM FISCO Intrinsically Safe (option code IE), install in accordance with Rosemount drawing 03151-1009.

Diaphragm seals for Rosemount 3051SAL



FF flush flanged seal

- Most common seal
- Good for use in general applications
- Easy installation on flanged connections ranging from 2-in. (DN 50) to 4-in. (DN 100)

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 136 for more information on material selection.

Flushing connection ring gaskets		
S0	No gasket for lower housing	★
SY	Thermo-tork® TN-9000	★
SJ	PTFE gasket	★
SK	Barium sulfate-filled PTFE gasket	
SN	GRAFOIL® gasket	

Table 4. FF flush flanged Seal Ordering Information

The starred offerings (★) represent the most common options and should be selected for best delivery. The non-starred offerings are subject to additional delivery lead time.

Remote seal diaphragm coating		
SZ[3]	0.0002-in. (5 µm) gold plated diaphragm	
SV	PTFE coated diaphragm for non-stick purposes	

Complete the Rosemount 3051SAL model number by specifying options as needed:

page 14	ERS transmitter options	
page 22	Scalable level transmitter options	

1. Not available with option code SC.
2. Supplied with Thermo-tork TN-9000 gasket if no other flushing connection ring gasket option is selected.
3. Not available with tantalum diaphragms (material of construction codes CC and DC).

EF extended flanged seal

- Good for use in viscous applications with plugging issues
- Seal diaphragm installed flush with inner tank wall to prevent process plugging
- Easy installation on 3-in. (DN 80) and 4-in. (DN 100) flanged connections

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 136 for more information on material selection.

Table 5. EF extended flanged Seal Ordering Information

Remote seal diaphragm thickness		
SC	0.006-in. (150 µm) diaphragm thickness	
Remote seal diaphragm coating		
SZ	0.0002-in. (5 µm) gold plated diaphragm	
SV	PTFE coated diaphragm for non-stick purposes	

Complete the Rosemount 3051SAL model number by specifying options as needed:

page 14	ERS transmitter options	
page 22	Scalable level transmitter options	

RF remote flanged seal

- Designed to improve performance on smaller process connections
- Easy installation on flanged connections ranging from 1- to 1.5-in. (DN 25–DN 40)
- Lower housing/flushing ring required.

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment.

See page 136 for more information on material selection.

SN	GRAFOIL gasket (for use with flushing connection ring)	★
S6	TopChem 2000 (for use with flushing connection ring)	
SK	Barium sulfate-filled PTFE gasket (for use with flushing connection ring)	
Remote seal bolt		
S3	304 SST bolts	★
S4	316 SST bolts	
Large diaphragm size		
S9	4.1-in. [104 mm] diaphragm diameter (Only available with Pressure Rating code 8)	
Remote seal diaphragm coating		
SZ[3]	0.0002-in. (5 µm) gold plated diaphragm	
SV	PTFE coated diaphragm for non-stick purposes	
Special threads in lower housing		
R9	Male lower housing threads	

Complete the Rosemount 3051SAL model number by specifying options as needed:

page 14	ERS transmitter options	
page 22	Scalable level transmitter options	

1. Supplied with C-4401 aramid fiber gasket if no other remote seal gasket material is selected.
2. Flushing connection ring/lower housing assembly bolts provided as standard are carbon steel.
3. Not available with tantalum diaphragms (material of construction codes CC and DC).

SC hygienic Tri-Clamp seal

- Good for use in hygienic applications
- Easy installation on tri-clover style Tri-Clamp connections (1.5- to 3-in.)
- Conforms to 3-A® Standard 74-06

Table 11. SC Hygienic Tri-Clamp Seal Ordering Information

The starred offerings (★) represent the most common options and should be selected for best delivery. The non-starred offerings are subject to additional delivery lead time.

Process connection[1]		
SC	Hygienic Tri-Clamp seal	★
Process connection size		
3[2]	1 1/2-in.	★
5[3]	2-in.	★
7	3-in.	★

0	1000 PSI	★

Isolating diaphragm material		**Upper housing material**	
LA00	316L SST	316L SST	★
LB00	Alloy C-276	316L SST	

Options (include with selected model number)

Remote seal diaphragm polishing		
RE	Electropolishing	
Remote seal diaphragm surface finish		
RD	10 µin. (0.25 µm) R_a diaphragm surface finish	
RG	15 µin. (0.375 µm) R_a diaphragm surface finish	
RH	20 µin. (0.5 µm) R_a diaphragm surface finish	
Surface finish certification[4]		
Q16	Surface finish certification for hygienic remote seals	★

Complete the Rosemount 3051SAL model number by specifying options as needed:

page 14	ERS transmitter options
page 22	Scalable level transmitter options

1. Clamp and gasket furnished by user. The MWP is dependent upon the clamp pressure rating.
2. Min-span is 1000 inH_2O or 2490 mbar for 1 1/2-in. Tri-Clamp seal.
3. Min-span is 150 inH_2O or 373 mbar for 2-in. Tri-Clamp Seal.
4. Q16 is only available when the diaphragm seal has surface finish options (RD, RG, and RH).

SS hygienic tank spud seal

- Commonly used in hygienic level applications
- Seal diaphragm installed flush with inner tank wall
- Conforms to 3-A standard 74-06

Table 12. SS Hygienic Tank Spud Seal Ordering Information

The starred offerings (★) represent the most common options and should be selected for best delivery. The non-starred offerings are subject to additional delivery lead time.

Process connection[1]			
SS	Hygienic tank spud seal		★

Surface finish certification[4]		
Q16	Surface finishing certification for hygienic remote seals	★

Table 12. SS Hygienic Tank Spud Seal Ordering Information

The starred offerings (★) represent the most common options and should be selected for best delivery. The non-starred offerings are subject to additional delivery lead time.

Complete the Rosemount 3051SAL model number by specifying options as needed:

page 14	ERS transmitter options
page 22	Scalable level transmitter options

1. Clamp and ethylene propylene o-ring (conforms to 3-A standard 74 and USP Class VI) supplied.
2. Diaphragm brazed and TIG-welded to extension.
3. Require option code R6 (electropolishing).
4. Q16 is only available when the diaphragm seal has surface finish options (RG and RH).

Rosemount 3051L Level Transmitter

Rosemount 3051L Level Transmitter

The Rosemount 3051L Level Transmitter combines the performance and capabilities of Rosemount 3051 Transmitters with the reliability and quality of a direct mount seal in one model number. Rosemount 3051L Level Transmitters offer a variety of process connections, configurations, and fill fluid types to meet a breadth of level applications. Capabilities of a Rosemount 3051L Level Transmitter include:

- Quantify and optimize total system performance (option code QZ)
- Tuned-system assembly (option code S1)
- Power advisory can pro actively detect degraded electrical loop integrity issues (option code DA0)
- Local Operator Interface (LOI) with straightforward menus and built-in configuration buttons (option code M4)

Additional information:
Specifications: page 126
Certifications: page 142
Dimensional drawings: page 169

See Specifications and options for more details on each configuration. Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 136 for more information on material selection.

Table 13. Rosemount 3051L Level Transmitter Ordering Information

Lower housing intermediate gasket material				
S0	No gasket for lower housing			★
SY	Thermo-Tork TN-9000			★
NACE certificate[27]				
Q15	Certificate of compliance to NACE MR0175/ISO 15156 for wetted materials			★
Q25	Certificate of compliance to NACE MR0103 for wetted materials			★
Typical model number: 3051L 2 A A0 D 21 A A F1				

1. Select Configuration Buttons (option code D4 or DZ) or Local Operator Interface (option code M4) if local configuration buttons are required.
2. Option HR5 configures the HART output to HART Revision 5. Option HR7 configures the HART output to HART Revision 7. The device can be field configured to HART Revision 5 or 7 if desired. HART Revision 5 is the default HART output.
3. Option code M4 - LCD Display with Local Operator Interface required for local addressing and configuration.
4. Requires wireless options and engineered polymer housing. Available approvals are FM Intrinsically Safe, (option code I5), CSA Intrinsically Safe (option code I6), ATEX Intrinsic Safety (option code I1), IECEx Intrinsic Safety (option code I7) and EAC Intrinsic Safety (option code IM).
5. Only available with C6, E2, E5, I5, K5, KB and E8 approval. Not available with GE, GM, SBS, DA0, M4, D4, DZ, QT, HR5, HR7, CR, CS, CT.

6. Materials of Construction comply with metallurgical requirements highlighted within NACE MR0175/ISO 15156 for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR0103 for sour refining environments.
7. At ambient pressure of 14.7 psia (1 bar-a) and ambient temperature of 70 °F (21 °C). Temperature limits are reduced in vacuum service.
8. Due to heat transfer to the transmitter, the maximum process temperature of the transmitter will be de-rated if ambient or process temperatures exceed 185 °F (85 °C). Consult Instrument Toolkit to verify the application.
9. This is a food grade fill fluid.
10. Not suitable for vacuum applications.
11. Not available with Wireless output (code X).
12. Only available with Wireless output (code X).
13. Not available with Product certifications options E8, K8, E5, K5, C6, K6, E7, K7, E2, K2, E3, KB, KD.
14. Only valid with FOUNDATION Fieldbus output (code F).
15. "Assemble-to" items are specified separately and require a completed model number.
16. Dust approval not applicable to output code X. See "Rosemount 3051 Wireless" on page 165 for wireless approvals.
17. Only available with output codes A - 4–20mA HART, F - FOUNDATION Fieldbus, and W - PROFIBUS PA. Also only available with G1/2 housing thread types.
18. Nonincendive certification not provided with Wireless output option code (X).
19. Only available with product certifications E7, E8, I1, I7, IA, K7, K8, KD, N1, N7.
20. Not available with FOUNDATION Fieldbus (Output Code F) or Wireless output (code X) or Low Power (output code M).
21. Contact an Emerson representative for availability.
22. Only available with HART 4–20 mA output (code A).
23. Only available with 4–20 mA HART output (code A) and Wireless output (code X).
24. The T1 option is not needed with FISCO Product Certifications; transient protection is included in the FISCO product certification codes IA, IB, and IE.
25. The V5 option is not needed with the T1 option; external ground screw assembly is included with the T1 option.
26. Supplied with C-4401 aramid fiber gasket.
27. NACE compliant wetted materials are identified by Footnote 6.

Rosemount 2051L Liquid Level Transmitter

Rosemount 2051L Liquid Level Transmitter

Configuration	Transmitter output code
4–20 mA HART Rosemount 2051 Rosemount 2051 with Selectable HART(1)	A
Lower power Rosemount 2051 Rosemount 2051 with Selectable HART(1)	M
FOUNDATION Fieldbus	F
PROFIBUS	W
Wireless	X

1. The 4–20mA with Selectable HART device can be ordered with Transmitter Output option code A plus any of the following options codes: M4, QT, DZ, CR, CS, CT, HR5, HR7.

Additional information
Specifications: page 126
Certifications: page 159
Dimensional drawings: page 169

See Specifications and options for more details on each configuration. Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 136 for more information on material selection.

1. HART Revision 5 is the default HART output. The Rosemount 2051 with Selectable HART can be factory or field configured to HART Revision 7. To order HART Revision 7 factory configured, add option code HR7.
2. Materials of Construction comply with metallurgical requirements highlighted within NACE MR0175/ISO 15156 for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR0103 for sour refining environments. Order with Q15 or Q25 to receive a NACE certificate.
3. At ambient pressure of 14.7 psia (1 bar-a) and ambient temperature of 70 °F (21 °C). Temperature limits are reduced in vacuum service.
4. Due to heat transfer to the transmitter, the maximum process temperature of the transmitter will be de-rated if ambient or process temperatures exceed 185 °F (85 °C). Consult Instrument Toolkit to verify the application.
5. This is a food grade fill fluid.
6. Not suitable for vacuum applications.
7. Requires option code S1.
8. Not available with output code X.
9. Not available with Low Power output code m
10. Only available with output code X.
11. Only valid with FOUNDATION Fieldbus output code F.
12. “Assemble-to” items are specified separately and require a completed model number.
13. Not valid with FOUNDATION Fieldbus output code F and Wireless Output Code X.
14. Only available with 4–20 mA HART (output codes A and M).
15. Only available with HART 4–20 mA output(output codes A) and Wireless output(output code X).
16. Not available with Remote Mount Seal Assembly option S1.
17. Transmitter is shipped with 316 SST conduit plug (uninstalled) in place of standard carbon steel conduit plug.
18. The V5 option is not needed with the T1 option; external ground screw assembly is included with the T1 option.
19. The T1 option is not needed with FISCO Product Certifications; transient protection is included in the FISCO product certification codes IA, IE, IF, and IG.
20. NAMUR-Compliant operation is pre-set at the factory.
21. Only available with HART 4–20 mA output(output code A).
22. Supplied with C-4401 aramid fiber gasket.
23. Not available with Option Codes A0, B0, and G0.
24. NACE Compliant wetted materials are identified by Footnote 2.

Rosemount 1199 Direct Mount Seal Systems

Tuned-System Assembly Comprised of Rosemount 1199 Direct Mount Seal combined with Rosemount 1199 Remote Mount Seal

Rosemount 1199 Direct Mount Seals reduce installation costs by eliminating mounting hardware. Their advanced design also minimizes oil volume improving performance.

Product features and capabilities include:

- Direct Mount gage or absolute seal system can be used for open or vented to atmosphere tank applications
- Tuned-System Assembly order codes can be used to improve performance for DP measurements in closed or pressurized tank applications
- Variety of process connections
- Quantified performance for the entire transmitter/seal assembly (QZ option)

Additional Information:

Specifications: page 126
Dimensional drawings: page 169

Rosemount 1199 Direct Mount Seal

The Rosemount 1199 Direct Mount Seal also requires specification of a Rosemount pressure device. See the appropriate Product Data Sheet for the desired device and include the option indicated in the table below for the configuration desired.

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 136 for more information on material selection.

When ordering Rosemount 1199 Direct and Remote Mount Seals, add the correct seal system ordering code to the transmitter or gage model.

Table 15. Direct Mount Seal Attach To Code Per Transmitter or Gage Model

Rosemount model	Two seals	One seal
3051S_C	B12	B11
3051C	S2	S1

1. All welded system connection types require either a 316L SST or Alloy C-276 isolating diaphragm in the pressure transmitter model codes.
2. At ambient pressure of 14.7 psia (1 bar-a) and ambient temperature of 70 °F (21 °C).
3. Due to heat transfer to the transmitter, the maximum process temperature of the transmitter will be de-rated if ambient or process temperatures exceed 185 °F (85 °C). Consult Instrument Toolkit to verify the application.
4. This is a food grade fill fluid.
5. Not suitable for vacuum applications.
6. Maximum working pressure is 4000 psi (275 bar)

Rosemount 1199 Remote Mount Seal Systems

Tuned-System Assembly Comprised of Rosemount 1199 Direct Mount Seal combined with Rosemount 1199 Remote Mount Seal

Rosemount 1199 Remote Mount Seals are used commonly at the top of the vessel when a DP measurement is required. The capillary that is used is available in three different diameters to optimize time response and reduce temperature effects.

Product features and capabilities include:

- Remote Mount Seals can be used for high temperature applications.
- Remote Mount Seals are used on the low pressure side of the transmitter for Tuned-System Assemblies that can be used for DP measurements in closed or pressurized tank applications.
- Variety of process connections.
- Quantified performance for the entire transmitter/seal assembly (QZ option).

Additional Information:

Specifications: page 126
Certifications: page 159
Dimensional drawings: page 169

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 140 for more information on material selection.

Rosemount 1199 Remote Mount Seal

The Rosemount 1199 Remote Mount Seal also requires specification of a Rosemount pressure transmitter. See the appropriate product data sheet for the desired transmitter and include the option indicated in the table below for the configuration desired.

When ordering Rosemount 1199 Direct and Remote Mount Seals, make sure to add the correct seal system ordering code to the transmitter or gage model.

Table 17. Direct Mount Seal Attach To Code Per Transmitter or Gage Model

Rosemount model	Two seals	One seal
3051S_C	B12	B11
3051C	S2	S1

68	45.9 ft. (14,0 m)	
69	49.2 ft. (15,0 m)	

1. All welded system connection types require either a 316L SST or Alloy C-276 isolating diaphragm in the pressure transmitter model codes.
2. At ambient pressure of 14.7 psia (1 bar-a) and ambient temperature of 70 °F and must be further derated if ambient, temperature exceeds 70 °F (21 °C).
3. Due to heat transfer to the transmitter, the maximum process temperature of the transmitter will be de-rated if ambient or process temperatures exceed 185 °F (85 °C). Consult Instrument Toolkit to verify the application.
4. Only available with Seal Connection Type/Capillary ID, Description Codes C, D, F, G, J, K, N, and P.
5. Only available with Seal Connection Type/Capillary ID, Description Codes D, G, K, and P.
6. This is a food grade fill fluid.
7. Not suitable for vacuum applications.
8. PVC coating should not be exposed to temperatures above 212 °F (100 °C) to avoid the possibility of thermal breakdown.

Continue specifying a completed model number by choosing a remote seal type below:

Alternate design		
E	One piece design	★
Typical model number: 1199 W DC 1 0 A FFW 7 1 DA 0 0		

1. Only available with two piece design.
2. For use with spiral wound metallic gaskets.
3. Not available with option code C.
4. Only available in Process Connection Size code G, 7, and J.
5. Not available with welded capillary connections or direct mount.
6. Operating temperature limited to 302 °F (150 °C).
7. Only available with one-piece design, option code E.
8. Supplied standard with Thermo-tork TN-9000 if no other gasket option is selected.
9. The mounting flange and upper housing are a single item for the one-piece design. Only available with diaphragm and wetted part material codes DA, DB, DJ, DF, DV, DH, DE, DP, WW, DZ, D4, DC, and D5.
10. Materials of Construction comply with metallurgical requirements highlighted within NACE MR 0175/ISO 15156 for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR 0103 for sour refining environments.
11. Only available on 316LSS, Alloy 400 and Alloy C-276.

RFW remote flanged seal

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 136 for more information on material selection.

Typical model number: 1199 W DC 1 0 A WFW 7 1 LA L N	

1. Supplied with C-4401 Aramid fiber gasket if no other gasket option is selected.
2. Consult factory for special process connection sizes, flange pressure ratings, diaphragm/lower housing materials, and pipe schedules.
3. Materials of Construction comply with metallurgical requirements highlighted within NACE MR 0175/ISO 15156 for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR 0103 for sour refining environments.

Specifications

Liquid level transmitter specifications

Performance specifications

For zero-based spans, reference conditions, silicone oil fill, glass-filled PTFE O-rings, SST materials, coplanar flange (Rosemount 3051SMV, 3051S_C) or 1/2–14 NPT (Rosemount 3051S_T) process connections, digital trim values set to equal range points.

Conformance to specification (±3σ [Sigma])

Technology leadership, advanced manufacturing techniques, and statistical process control ensure measurement specification conformance to ±3σ or better.

Reference accuracy[1]

Stated reference accuracy equations include terminal based linearity, hysteresis, and repeatability, but does not include analog output reference accuracy of ±0.005% of span.

1. *Stated reference accuracy equations include terminal based linearity, hysteresis, and repeatability, but does not include analog only reference accuracy of ±0.005% of span.*

DP total accuracy for Enhanced ERS System performance[1]

Sensor type	3051SAM_ _G2, 3051SAL_ _G2 250 inH_2O (622,1 mbar)	3051SAM_ _G3, 3051SAL_ _G3 1000 inH_2O (2488,4 mbar)	3051SAM_ _T1, 3051SAL_ _T1 30 psi (2,1 bar)	3051SAM_ _T2, 3051SAL_ _T2 150 psi (10,34 bar)	3051SAM_ _G4, 3051SAL_ _G4 300 psi (20,7 bar)	3051SAM_ _T3, 3051SAL_ _T3 800 psi (41,4 bar)

Rosemount 3051SAL with direct mount seal types and sizes below[3]: • FF, FC, PF ≥ 2-in./DN50 • EF ≥ 3-in./DN80 • All RT, RF, RC, SS • SC ≥ 2.5-in.	2.2 inH_2O (5,5 mbar)	3.0 inH_2O (7,5 mbar)	2.3 inH_2O (6,0 mbar)	3.2 inH_2O (8,0 mbar)	6.5 inH_2O (16 mbar)	8.3 inH_2O (21 mbar)
Rosemount 3051SAL with other seal types and sizes	Consult Instrument Toolkit™ for performance.					

1. Includes full ambient and temperature range from –40 to 85 °C (–40 to 185 °F) requires two transmitters with identical sensor ranges. Specification are only applicable for spans down to 10:1.
2. For Rosemount 3051SAM assembled to a Rosemount 1199 Diaphragm Seal, use Rosemount 3051SAL specification for identical seal types and sizes.
3. For Rosemount 3051SAL with direct mount seals, specification applies to process temperatures from -45 to 205 °C and excludes diaphragm option code SC, 6-mil diaphragm thickness.

For FOUNDATION Fieldbus and wireless devices, use calibrated range in place of span.

	Ultra	Classic
3051SAM[1][2]	±0.025% of Span For spans less than 10:1, ±(0.005% URL + 0.015% span)	±0.035% of Span. For spans less than 10:1, ±(0.005% URL + 0.015% span)
3051SAL_C	±0.055% of Span. For spans less than 10:1, ±(0.005% URL + 0.015% span)	±0.065% of Span. For spans less than 10:1, ±(0.005% URL + 0.015% span)
3051SMV assembled to 1199 (Code B11)	N/A	±0.065% span For spans less than 10:1, +/-(0.005% URL + 0.015% span)
3051L 3051C or 3051T assembled to 1199 (code S1)	±0.075% of Span. For spans less than 10:1, ±(0.005% URL + 0.025% span)	
2051L 2051C or 2051T assembled to 1199 (code S1)	±0.075% of Span. For spans less than 10:1, ±(0.005% URL + 0.025% span)	

1. Stated reference accuracy equations include terminal based linearity, hysteresis, and repeatability, but does not include analog only reference accuracy of ±0.005% of span.
2. For the Rosemount 3051SAM with 1199 assemble to code B11, use 3051SAL_C specifications.

DP Reference Accuracy of Rosemount 3051S ERS System

Two coplanar gage sensors (Rosemount 3051SAM_ _G)	**Ultra**	**Classic**
Ranges 2–4	±0.035% of DP span	±0.049% of DP span
Range 5	±0.071% of DP span	±0.092% of DP span
Two coplanar (Rosemount 3051SAM_ _A)		
Ranges 1–4	±0.035% of DP span	±0.049% of DP span
Two in-line gage sensors (Rosemount 3051SAM_ _T) Two in-line absolute sensors (Rosemount 3051SAM_ _E)		
Ranges 1–4	±0.035% of DP span	±0.049% of DP span
Two liquid level sensors (Rosemount 3051SAL)		
Ranges 1–5	±0.092% of DP span	±0.092% of DP span

Warranty[1]

Models[1]	**Ultra/Enhanced**	**Classic**
Rosemount 3051SAM	15-year limited warranty[2]	1-year limited warranty[3]

1. Warranty details can be found in Emerson Terms and Conditions of Sale, Document 63445, Rev G (10/06).
2. Rosemount Ultra transmitter has a limited warranty of fifteen (15) years from date of shipment. All other provisions of Emerson standard limited warranty remains the same.
3. Goods are warranted for twelve (12) months from the date of initial installation or eighteen (18) months from the date of shipment by seller, whichever period expires first.

Dynamic performance

Rosemount Level Transmitters

Rosemount 3051SAL_C, 3051L, and 2051L models - have an 4–20 mA HART (1–5 Vdc HART Low Power) update rate of 22 updates per second.

ERS Systems

Rosemount 3051SAM, 3051SAL_P, and 3051SAL_S models - have an 4–20 mA HART (1–5 Vdc HART Low Power) update rate of 11 updates per second. See page 93 for *Wireless*HART update rates.
For total response time, see Instrument Toolkit.

Ambient temperature effect

See Instrument Toolkit.

Mounting position effects

With liquid level remote mount seal in vertical plane, zero shift of up to ±1 inH_2O (2,49 mbar); with remote mount seal in horizontal plane, zero shift of up to ±5 inH_2O (12,45 mbar) plus extension length on extended units; all zero shifts can be zeroed; no span effect.

Vibration effect

Rosemount 3051SAM 3051SAL	Less than ±0.1% of URL when tested per the requirements of IEC60770-1 field or pipeline with high vibration level (10–60 Hz 0.21mm displacement peak amplitude/60–2000 Hz 3g). For Housing Style codes 1J, 1K, 1L, 2J, and 2M: Less than ±0.1% of URL when tested per the requirements of IEC60770-1 field with general application or pipeline with low vibration level (10–60 Hz 0.15 mm displacement peak amplitude/60–500 Hz 2g).
Rosemount 3051L	Measurement effect due to vibrations is negligible except at resonance frequencies. When at resonance frequencies, vibration effect is less than ±0.1% of URL per g when tested between 15 and 2000 Hz in any axis relative to pipe-mounted process conditions.
Rosemount 2051L	Less than ±0.1% of URL when tested per the requirements of IEC60770-1 field or pipeline with high vibration level (10–60 Hz 0.21 mm displacement peak amplitude/60–2000 Hz 3 g).

Power supply effect

Less than ±0.005 percent of calibrated span per volt.

Electromagnetic Compatibility (EMC)

Meets all relevant requirements of EN 61326 and NAMUR NE-21.[(1)]

Transient protection (option T1)

Rosemount 3051SAM 3051SAL	Meets IEEE C62.41.2-2002, Location Category B 6 kV crest (0.5 µs–100 kHz) 3 kA crest (8 × 20 microseconds) 6 kV crest (1.2× 50 microseconds)
Rosemount 3051L	Meets IEEE C62.41, Category B 6 kV crest (0.5 µs–100 kHz) 3 kV crest (8 × 20 microseconds) 6 kV crest (1.2 × 50 microseconds)
Rosemount 2051L	Meets IEEE C62.41, Location Category B 6 kV crest (0.5 µs–100 kHz) 3 kV crest (8 × 20 microseconds) 6 kV crest (1.2 × 50 microseconds)

1. *NAMUR NE-21 does not apply to wireless output code X or ERS configurations.*

Functional specifications

Range and sensor Limits

Table 44. Rosemount 3051SAM_ _G, 3051SAL_ _D, 3051SAL_ _G Range and Sensor Limits

Range	Minimum span		Range limits		
	Ultra	Classic	Upper (URL)	Lower (LRL)	
				3051SAL_G[1][2]	3051SAL_D[1]
2	1.3 inH_2O (3,11 mbar)	2.5 inH_2O (6,23 mbar)	250.0 inH_2O (0,62 bar)	–250.0 inH_2O (–0,62 bar)	–250.0 inH_2O (–0,62 bar)
3	5.0 inH_2O (12,4 mbar)	10.0 inH_2O (24,9 mbar)	1000.0 inH_2O (2,49 bar)	–393.0 inH_2O (–979 mbar)	–1000.0 inH_2O (–2,49 bar)
4	1.5 psi (103,4 mbar)	3.0 psi (206,8 mbar)	300.0 psi (20,7 bar)	–14.2 psig (–979 mbar)	–300.0 psi –20,7 bar)
5	10.0 psi (689,5 mbar)	20.0 psi (1,38 bar)	2000.0 psi (137,9 bar)	–14.2 psig (–979 mbar)	–2000.0 psi (–137,9 bar)

1. When specifying a Rosemount 3051SAL Ultra, use Classic minimum span. Minimum span limits may also be limited by the remote seal that is specified with the system.
2. Assumes atmospheric pressure of 14.7 psig (1 bar).

Table 45. Rosemount 3051SAM_ _A, 3051SAL_ _A Range and Sensor Limits[1]

Range	Minimum span		Range and sensor limits	
	Ultra	Classic	Upper (URL)	Lower (LRL)
1	0.3 psia (20,7 mbar)	0.3 psia (20,7 mbar)	30 psia (2,07 bar)	0 psia (0 bar)
2	0.75 psia (51,7 mbar)	1.5 psia (0,103 bar)	150 psia (10,34 bar)	0 psia (0 bar)
3	4 psia (275,8 mbar)	8 psia (0,55 bar)	800 psia (55,16 bar)	0 psia (0 bar)
4	20 psia (1,38 bar)	40 psia (2,76 bar)	4000 psia (275,8 bar)	0 psia (0 bar)

1. When specifying a Rosemount 3051SAL Ultra, use Classic minimum span. Minimum span limits may also be limited by the remote seal that is specified with the system.

Table 46. Rosemount 3051SAM_ _T, 3051SAM_ _E, 3051SAL_ _T, 3051SAL_ _E Range and Sensor Limits

Range	Minimum span		Range and sensor limits		
	Ultra	Classic	Upper (URL)	Lower (LRL) (Abs.)	Lower[1] (LRL) (Gage)
1	0.3 psi (20,7 mbar)	0.3 psi (20,7 mbar)	30 psi (2,07 bar)	0 psia (0 bar)	–14.7 psig (–1,01 bar)
2	0.75 psi (51,7 mbar)	1.5 psi (0,103 bar)	150 psi (10,34 bar)	0 psia (0 bar)	–14.7 psig (–1,01 bar)
3	4 psi (275,8 mbar)	8 psi (0,55 bar)	800 psi (55,16 bar)	0 psia (0 bar)	–14.7 psig (–1,01 bar)
4	20 psi (1,38 bar)	40 psi (2,76 bar)	4000 psi (275,8 bar)	0 psia (0 bar)	–14.7 psig (–1,01 bar)
5	1000 psi (68,9 bar)	2000 psi (137,9 bar)	10000 psi (689,5 bar)	0 psia (0 bar)	–14.7 psig (–1,01 bar)

1. Assumes atmospheric pressure of 14.7 psig (1 bar).

Table 47. 3051L Range and Sensor Limits

Range	Minimum span	Range and sensor limits		
		Upper (URL)	Lower (LRL)	
			Rosemount 3051L Differential	Rosemount 3051L Gage[1]
2	2.5 inH_2O (6,2 mbar)	250 inH_2O (0,62 bar)	–250 inH_2O (–0,62 bar)	–250 inH_2O (–0,62 bar)
3	10 inH_2O (24,9 mbar)	1000 inH_2O (2,49 bar)	–1000 inH_2O (–2,49 bar)	-393 inH_2O (-979 mbar)
4	3 psi (0,20 bar)	300 psi (20,6 bar)	–300 psi (–20,6 bar)	-14.2 psig (979 mbar)
5	20 psi (1,38 bar)	2000 psi (137,9 bar)	N/A	N/A

1. Assumes atmospheric pressure of 14.7 psig.

Table 48. 2051L Range and Sensor Limits

Range	Minimum span	Range and sensor limits		
		Upper (URL)	Lower (LRL)	
			Rosemount 2051L Differential	Rosemount 2051L Gage[1]
2	2.5 inH_2O (6,2 mbar)	250 inH_2O (0,62 bar)	–250 inH_2O (–0,62 bar)	–250 inH_2O (–0,62 bar)
3	10 inH_2O (24,9 mbar)	1000 inH_2O (2,49 bar)	–1000 inH_2O (–2,49 bar)	–393 inH_2O (–979 mbar)
4	3 psi (0,207 bar)	300 psi (20,6 bar)	–300 psi (–20,7 bar)	–14.2 psig (–979 mbar)

1. Assumes atmospheric pressure of 14.7 psig.

Service

Liquid, gas, and vapor applications

Protocols

4–20 mA (output code A)

Output

Two-wire 4–20 mA, user-selectable for linear or square root output. Digital process variable superimposed on 4–20 mA signal, available to any host that conforms to the HART protocol.

Power supply

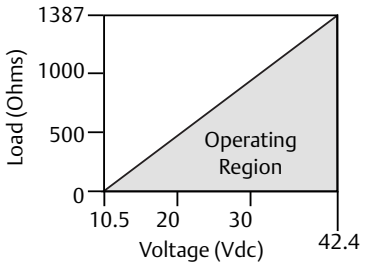
External power supply required. Standard transmitter (4–20 mA) operates on 10.5 to 42.4 Vdc with no load. The Rosemount 3051S ERS System operates on 16 to 42.4 Vdc with no load.

Load limitations

Maximum loop resistance is determined by the voltage level of the external power supplied as described by:

Figure 3. Standard HART Transmitter

Maximum Loop Resistance = 43.5 * (Power supply voltage – 10.5)

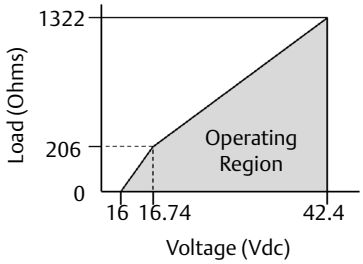


The Field Communicator requires a minimum loop resistance of 250Ω for communication.

Figure 4. Rosemount 3051S ERS System

If supply voltage ≤ 16.74 Vdc:
Maximum Loop Resistance = 277 * (Power supply voltage – 16.0)

If supply voltage > 16.74 Vdc:
Maximum Loop Resistance = 43.5 * (Power supply voltage – 12.0)



The Field Communicator requires a minimum loop resistance of 250Ω for communication.

FOUNDATION Fieldbus (output code F)

Power supply

External power supply required; transmitters operate on 9.0 to 32.0 Vdc transmitter terminal voltage.

Current draw

17.5 mA for all configurations (including LCD display option)

Indication

Optional two-line LCD display

FOUNDATION Fieldbus Function Block Execution Times

Block	Execution time (milliseconds)		
	3051SAL_C	3051L	2051L
Resource	N/A	N/A	N/A
Transducer	N/A	N/A	N/A
LCD Block	N/A	N/A	N/A
Analog Input 1, 2	20	30	35
PID	35(1)	45	45
Input Selector	20	30	30
Arithmetic	20	35	35
Signal Characterizer	20	40	40
Integrator	20	35	35
Output Splitter	20	N/A	N/A
Control Selector	20	N/A	N/A

1. PID with Auto-tune.

FOUNDATION Fieldbus Parameters

Schedule Entries	7 (max.)
Links	20 (max.)
Virtual Communications Relationships (VCR)	12 (max.)

Standard function blocks

Resource block

Contains hardware, electronics, and diagnostic information.

Transducer block

Contains actual sensor measurement data including the sensor diagnostics and the ability to trim the pressure sensor or recall factory defaults.

LCD block

Configures the local display.

Two analog input blocks

Processes the measurements for input into other function blocks. The output value is in engineering units or custom and contains a status indicating measurement quality.

PID block

Contains all logic to perform PID control in the field including cascade and feedforward.

Backup Link Active Scheduler (LAS)

The transmitter can function as a Link Active Scheduler if the current link master device fails or is removed from the segment.

Advanced control function block suite (option code A01)

Input selector block

Selects between inputs and generates an output using specific selection strategies such as minimum, maximum, midpoint, average, or first “good.”

Arithmetic block

Provides pre-defined application-based equations including flow with partial density compensation, electronic remote seals, hydrostatic tank gauging, ratio control, and others.

Signal characterizer block

Characterizes or approximates any function that defines an input/output relationship by configuring up to twenty X, Y coordinates. The block interpolates an output value for a given input value using the curve defined by the configured coordinates.

Integrator block

Compares the integrated or accumulated value from one or two variables to pre-trip and trip limits and generates discrete output signals when the limits are reached. This block is useful for calculating total flow, total mass, or volume over time.

FOUNDATION Fieldbus diagnostics suite (option code D01)

The FOUNDATION Fieldbus Diagnostics provide Abnormal Situation Prevention (ASP) indication. The integral statistical process monitoring (SPM) technology calculates the mean and standard deviation of the process variable 22 times per second. The Rosemount 3051S_L and 3051L use these values and highly flexible configuration options for customization to detect many user-defined or application specific abnormal situations (e.g. detecting plugged impulse lines and fluid composition change).

PROFIBUS PA (output code W)

Profile version

3.02

Power supply

External power supply required; transmitters operate on 9.0 to 32.0 Vdc transmitter terminal voltage.

Current draw

17.5 mA for all configurations (including LCD display option)

Output update rate

Four times per second.

Standard function blocks

Analog input (AI block)

The AI function block processes the measurements and makes them available to the host device. The output value from the AI block is in engineering units and contains a status indicating the quality of the measurement.

Physical block

The physical block defines the physical resources of the device including type of memory, hardware, electronics, and diagnostic information.

Transducer block

Contains actual sensor measurement data including the sensor diagnostics and the ability to trim the pressure sensor or recall factory defaults.

Indication

Optional two-line LCD display

Local operator interface

Optional external configuration buttons

Rosemount 3051SAL_C Wireless self-organizing networks

Output

IEC 62591 (*Wireless*HART), 2.4 GHz DSSS

Radio frequency power output from antenna

External Antenna (WK option):
Maximum of 10 mW (10 dBm) EIRP
Extended Range, External Antenna (WM option):
Maximum of 18 mW (12.5 dBm) EIRP
High-Gain, Remote Antenna (WN option):
Maximum of 40 mW (16 dBm) EIRP

Local display

The optional seven-digit LCD display can display primary variable in engineering units, percent of range, sensor module temperature, and electronics temperature. Display updates at update rate up to once per minute. The display updates based on the wireless update rate.

Update rate

User selectable 1 second to 60 minutes.

Power module

Field replaceable, keyed connection eliminates the risk of incorrect installation, Intrinsically Safe Lithium-thionyl chloride Power Module with polybutadine terephthalate (PBT) enclosure. Ten-year life at one minute update rate.(1)

1. Reference conditions are 70 °F (21 °C), and routing data for three additional network devices.

Note

Continuous exposure to ambient temperature limits of –40 °F or 185 °F (–40 °C or 85 °C) may reduce specified life by less than 20 percent.

Overpressure limits

Limit is 0 psia to the flange rating or sensor rating, whichever is lower.

Table 49. Rosemount 3051L, 2051L and Level Flange Rating Limits

Standard	Type	CS Rating	SST Rating
ANSI/ASME	Class 150	285 psig	275 psig
ANSI/ASME	Class 300	740 psig	720 psig
ANSI/ASME	Class 600	1480 psig	1440 psig
At 100 °F (38 °C), the rating decreases with increasing temperature, per ANSI/ASME B16.5.			
DIN	PN 10–40	40 bar	40 bar
DIN	PN 10/16	16 bar	16 bar
DIN	PN 25/40	40 bar	40 bar
At 122 °F (50 °C), the rating decreases with increasing temperature per EN 1092-1 Annex F.			

Temperature limits

Ambient

–40 to 185 °F (–40 to 85 °C)
With LCD display[1]: –40 to 175 °F (–40 to 80 °C)
With option code P0: –20 to 185 °F (–29 to 85 °C)

1. LCD display may not be readable and LCD display updates will be slower at temperatures below –4 °F (–20 °C).

Storage

–50 to 185 °F (–46 to 85 °C)
With LCD display: –40 to 185 °F (–40 to 85 °C)
With wireless output: –40 to 185 °F (–40 to 85 °C)

Table 50. Rosemount 3051SAM ERS Process temperature Limits (Gage/Absolute Sensor)

Configuration	Coplanar gage/absolute sensor (Rosemount 3051SAM_ _G, 3051SAM_ _A)	In-line gage sensor/absolute sensor (Rosemount 3051SAM_ _T, 3051SAM_ _E)
Silicone Fill Fluid[1]	N/A	–40 to 250 °F (–40 to 121 °C)[3]
with Coplanar Flange[1]	–40 to 250 °F (–40 to 121 °C)[3]	N/A
with Traditional Flange[2]	–40 to 300 °F (–40 to 149 °C)[3]	N/A
with Level Flange[2]	–40 to 300 °F (–40 to 149 °C)[3]	N/A
with 305 Integral Manifold[1]	–40 to 300 °F (–40 to 149 °C)[3]	N/A
Inert Fill Fluid[1][4]	–40 to 185 °F (–40 to 85 °C)[5]	–22 to 250 °F (–30 to 121 °C)[3]

1. Process temperatures above 185 °F (85 °C) require de-rating the ambient limits by a 1.5:1 ratio. For example, for process temperature of 195 °F (91 °C), new ambient temperature limit is equal to 170 °F (77 °C). This can be determined as follows: (195 °F – 185 °F) × 1.5 = 15 °F, 185 °F –15 °F = 170 °F.
2. Process temperatures above 185 °F (85 °C) require de-rating the ambient limits by a 1:1 ratio.
3. 220 °F (104 °C) limit in vacuum service; 130 °F (54 °C) for pressures below 0.5 psia.
4. Not available with Rosemount 3051SAM_ _A.
5. 160 °F (71 °C) limit in vacuum service.

Table 51. Fill Fluid Specifications[1]

Seal fill fluid		Specific gravity at 77 °F (25 °C)	Viscosity at 77 °F (25 °C) (centistokes)	Temperature limits[1] [2]				
				No extension	2-in. (50 mm) extension	4-in. (100 mm) extension	Thermal optimizer	Capillary

1. Temperature limits are reduced in vacuum service. For more information on Fill Fluids see Rosemount DP Level Fill Fluid Specification Technical Note.
2. Due to heat transfer to the transmitter, the maximum process temperature of the transmitter will be de-rated if ambient or process temperatures exceed 185 °F (85 °C). Consult Instrument Toolkit to verify the application.
3. Only available with Thermal Range Expander.
4. Not suitable for vacuum applications.
5. This is a food grade fill fluid.

Figure 5. Thermal Range Expander Temperature Operating Range

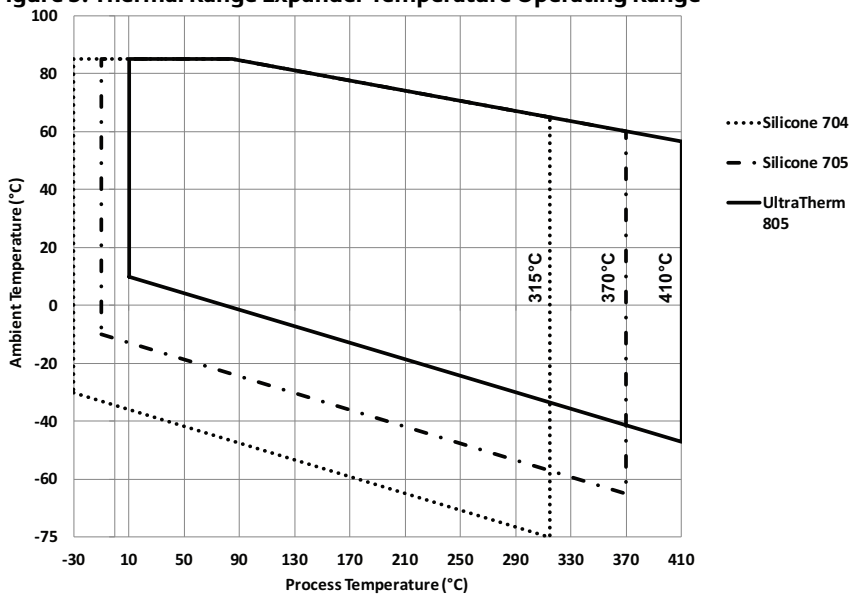

Figure 6. Thermal Optimizer with Silicone 704 Fill Fluid Temperature Limits

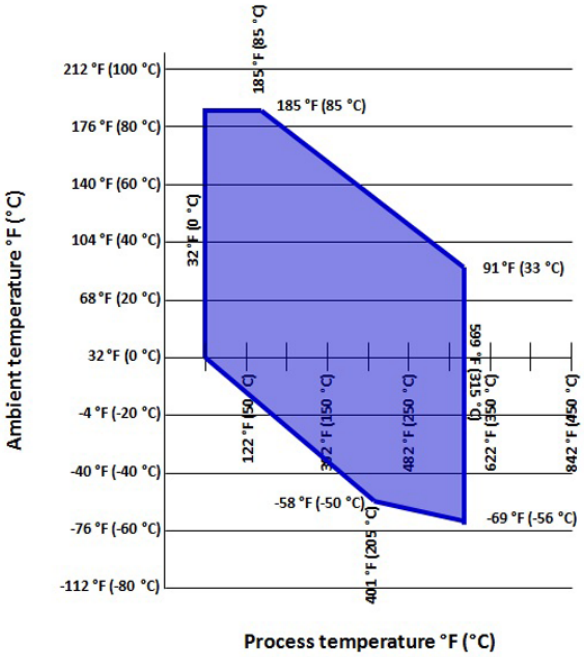

Figure 7. Thermal Optimizer with Silicone 705 Fill Fluid Temperature Limits

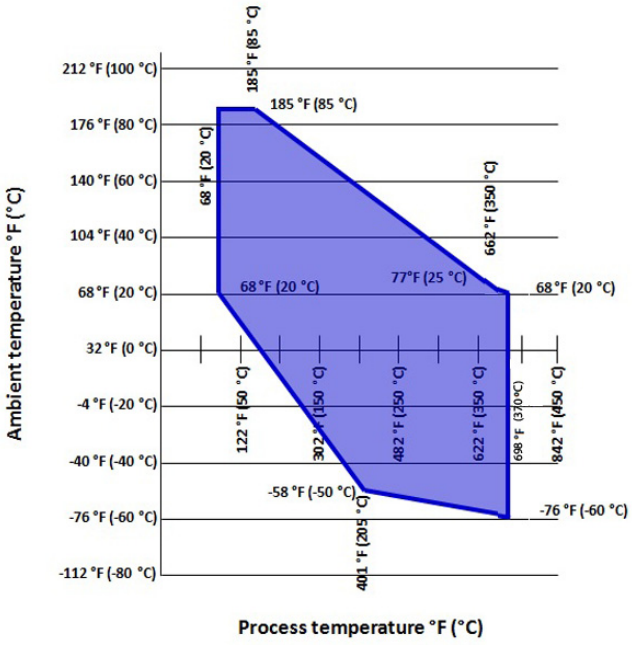

Humidity limits

0–100 percent relative humidity

Turn-on time

Rosemount 3051SAL_C	Performance within specifications less than 2.0 seconds after power is applied to the transmitter.
Rosemount 3051L	Performance within specifications less than 2.0 seconds (10.0 s for PROFIBUS protocol) after power is applied to the transmitter
Rosemount 2051L	Performance within specifications less than 2.0 seconds after power is applied to the transmitter.
Rosemount ERS System	Performance within specifications less than 6.0 seconds after power is applied.

Volumetric displacement

Less than 0.005-in.^{3} (0.08 cm^3)

Damping[(1)]

Software damping is in addition to sensor module response time.

Rosemount 3051SAL_C	Analog output response to a step change is user-selectable from 0 to 60 seconds for one time constant.
Rosemount 3051L	Analog output response to a step input change is user-selectable from 0 to 36 seconds for one time constant.
Rosemount 2051L	Analog output response to a step input change is user-selectable from 0 to 25.6 seconds for one time constant.
Rosemount ER S System	The PHI and PLO pressure measurements and the DP calculation may be independently dampened from 0 to 60 seconds for one time constant.

1. Does not apply to wireless option code X.

Physical specifications

Material selection

Emerson provides a variety of Rosemount products with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser's sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product materials, options, and components for the particular application. Emerson is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product options, configuration, or materials of construction selected.

Electrical connections

$^1/_2$–14 NPT, PG 13.5, G$^1/_2$, and M20 × 1.5 conduit. HART interface connections fixed to terminal block.

Non-wetted parts

Transmitter flange is CF-3M (cast version of 316L SST, material per ASTM-A743)

Rosemount 1199 Seal specifications

Functional specifications

Hygienic seal approvals

3-A

The following seals are 3-A approved and labeled:

SCW (Tri-clover style Tri-Clamp seal)

STW (Thin wall tank spud seal)

EES Flanged Tank spud extended seal

VCS (In-line tri-clover style Tri-Clamp seal)

SVS (Tuchenhagen VARIVENT compatible seal

SHP (Cherry-Burrell "I" line style seal

SLS (Dairy process connection - female thread)

EHEDG (Type EL Class I)

The following seals are EHEDG Type EL Class I approved and labeled:

SCW (Tri-clover style Tri-Clamp seal)

VCS (In-line tri-clover style Tri-Clamp seal)

SVS (Tuchenhagen VARIVENT compatible seal

SLS (Dairy process connection - female thread)

Ensure gasket selected for installation is approved to meet both application and EHEDG certification requirements.

Hygienic Fill Fluids

The hygienic fill fluids glycerin and water and Propylene Glycol and water meet United States Pharmacopeia(USP) and Food Chemical Codex (FCC) requirements and is Generally Recognized as Safe (GRAS) in accordance with the FDA Code of Federal Regulations Title 21. The hygienic fill fluid Neobee M-20 is approved under 21CFR 172.856 as a direct food additive and under 21 CFR 174.5 as an indirect food additive. Tri-Therm 300 is registered by NSF as meeting FDA 21 CFR regulatory requirements and is acceptable for use where there is possibility of incidental food contact (HT 1).

Hygienic O-rings:

The EPDM, Fluorocarbon (FMK), and Nitrilebutadiene (NBR) O-rings for the SSW Tank Spud Seal meet 3-A Hygienic Standard Number 18 Class 1 requirements. The EPDM O-ring also meets USP Class VI approval requirements.

Transmissible Spongiform Encephalopathy (TSE) Declaration

Emerson certifies no process wetted components used in hygienic seal products contain substances of animal origin. Materials used in the production or processing of wetted components for hygienic seals meet the requirements stated in EMA/410/01 Rev. 3 and ISO 22442-1:2015. Wetted components in hygienic seals are considered free of TSE.

Surface finish certification (Q16 option)

When ordering the Q16 option in the pressure transmitter model number, the surface finish of the seal diaphragm is certified per BPE 2002 requirements. This surface finish certification is available for Tri-Clamp, Tri-Clamp Inline, Tank Spud, and Thin Wall Tank Spud seal types.

NACE Standard (Q15 or Q25 option)

NACE (National Association of Corrosion Engineers) standard MR0175/ISO 15156 defines metallic material requirements for resistance to sulfide stress cracking when applied on petroleum production, drilling, gathering and flow line equipment, and field processing facilities to be used in H2S bearing hydrocarbon service. MR0103 provides material requirements exclusive to sour petroleum refining environments. Compliance guidelines are intended to include "wetted" materials as recommended by both NACE standards. The option code T in several of the general purpose seal types limits the wetted material offering. Metallurgical requirements for alloys used are virtually identical for the two standards, but application conditions enforced are different and can limit material acceptance. Contact an Emerson representative to aid in selecting the proper materials to meet the NACE standard.

Material traceability (Q8 Option)

Material traceability is provided for the seal, upper housing, and if applicable, lower housing/flushing connection or diaphragm extension, upon selecting the option code Q8 in the pressure transmitter model number. Material traceability for the transmitter/seal system is provided per the DIN EN10204 3.1 standard, and is only available for general purpose seal types.

Performance specifications

Instrument Toolkit calculates the remote seal system performance and validates model number configuration.

Remote seal system performance calculation report (QZ Option)

When the QZ option code is specified within the pressure transmitter model structure, Emerson will generate a remote seal system calculation report for the given application. This report quantifies all aspects of remote seal system performance including seal temperature effects, head temperature effects, seal response time, and transmitter total probable error.

Physical specifications

Material selection

Emerson provides a variety of Rosemount products with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser's sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product materials, options, and components for the particular application. Emerson is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product options, configuration, or materials of construction selected.

Note
If a lower housing is supplied, then the following gaskets are the default gaskets for each seal unless another gasket option is selected.

Wetted materials

Seal	Gaskets
FFW	Thermo-Tork TN-9000 gasket
EFW	No gasket is s3upplied
FCW	No gasket is supplied
FUW	No gasket is supplied
FVW	No gasket is supplied
RCW	Klinger C-4401 gasket

RTW	Klinger C-4401 gasket
PFW	Thermo-Tork TN-9000 gasket
PCW	No gasket is supplied
SSW	Ethylene Propylene O-ring
STW	Ethylene Propylene O-ring
UCW	Teflon O-ring
UCP	Barium-sulfate Filled PTFE O-ring
WSP	Klinger C-4401 gasket
WBW	Klinger C-4401 gasket
WFW	Klinger C-4401 gasket
WTW	Klinger C-4401 gasket
WWW	Klinger C-4401 gasket

Tagging

The Rosemount 1199 Remote Seal model number is marked on the transmitter nameplate (neck or top label). The pressure transmitter will be tagged in accordance with customer requirements. The standard stainless steel tag is wired to the transmitter. Tag is 0.02-in. (0.051 cm) thick with 0.125-in. (0.318 cm) high letters. A permanently attached tag is available upon request.

Calibration

Transmitters are factory calibrated to customer's specified range. If calibration is not specified, then the transmitters are calibrated at maximum range. Calibration is performed at ambient temperature and pressure.

Product certifications

Rosemount 3051S/3051SFx/3051S ERS

Rev 1.15

European Directive Information

A copy of the EU Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU Declaration of Conformity can be found at Emerson.com/Rosemount.

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by FM Approvals, a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Installing Equipment in North America

The US National Electrical Code® (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area Classification, gas, and temperature Class. This information is clearly defined in the respective codes.

USA

E5 FM Explosionproof (XP) and Dust-Ignitionproof (DIP)

Temperature class	Process temperature
T6	–60 °C to +70 °C
T5	–60 °C to +80 °C
T4	–60 °C to +120 °C

Special Conditions for Safe Use (X):

1. This device contains a thin wall diaphragm less than 1 mm thickness that forms a boundary between EPL Ga (process connection) and EPL Gb (all other parts of the equipment). The model code and datasheet are to be consulted for details of the diaphragm material. Installation, maintenance and use shall take into account the environmental conditions to which the diaphragm will be subjected. The manufacturer's instructions for installation and maintenance shall be followed in detail to assure safety during its expected lifetime.
2. Flameproof joints are not intended for repair.
3. Non-standard paint options may cause risk from electrostatic discharge. Avoid installations that could cause electrostatic build-up on painted surfaces, and only clean the painted surfaces with a damp cloth. If paint is ordered through a special option code, contact the manufacturer for more information.
4. Appropriate cable, glands and plugs need to be suitable for a temperature of 5 °C greater than maximum specified temperature for location where installed.

Temperature class	Process temperature
T6	–60 °C to +70 °C
T5	–60 °C to +80 °C
T4	–60 °C to +120 °C

Special Conditions for Safe Use (X):

1. This device contains a thin wall diaphragm less than 1 mm thickness that forms a boundary between EPL Ga (process connection) and EPL Gb (all other parts of the equipment). The model code and datasheet are to be consulted for details of the diaphragm material. Installation, maintenance and use shall take into account the environmental conditions to which the diaphragm will be subjected. The manufacturer's instructions for installation and maintenance shall be followed in detail to assure safety during its expected lifetime.
2. Flameproof joints are not intended for repair.
3. Non-standard paint options may cause risk from electrostatic discharge. Avoid installations that could cause electrostatic build-up on painted surfaces, and only clean the painted surfaces with a damp cloth. If paint is ordered through a special option code, contact the manufacturer for more information.
4. Appropriate cable, glands and plugs need to be suitable for a temperature of 5 °C greater than maximum specified temperature for location where installed.

Certificate: IECEx BAS 09.0014X (Dust)
Standards: IEC 60079-0:2011, IEC 60079-31:2008

3051S-ERS: Ex d IIC T4 ~ T6 Ga/Gb

Special Conditions for Safe Use (X):

1. Only the pressure transmitters, consisting of Rosemount 3051SC, 3051ST, 3051SL and 300S Series, are certified.
2. Flameproof joints are not intended for repair.
3. The ambient temperature range for the 3051S in a dust environment is –20 °C ≤ T_a ≤ 85 °C
4. The relation between temperature class and maximum temperature of process medium is as follows:

Temperature class	Ambient temperature	Process temperature
T6	–60 °C ≤ Ta ≤ +70 °C	–60 °C ≤ Ta ≤ +70 °C
T5	–60 °C ≤ Ta ≤ +80 °C	–60 °C ≤ Ta ≤ +80 °C
T4	–60 °C ≤ Ta ≤ +80 °C	–60 °C ≤ Ta ≤ +120 °C

5. The earth connection facility in the enclosure should be connected reliably.
6. During installation, use and maintenance of transmitter, observe the warning "Don't open the cover when the circuit is alive."
7. During installation, there should be no mixture harm to flameproof housing.
8. Cable entry, certified by NEPSI with type of protection Ex d IIC in accordance with GB3836.1-2000 and GB3836.2-2000, should be applied when installation in hazardous location. 5 full threads should be in engagement when the cable entry is assembled onto the transmitter. When pressure transmitter is used in the presence of combustible dust, the ingress of protection of the cable entry should be IP66.
9. The diameter of cable should observe the instruction manual of cable entry. The compressing nut should be fastened. The aging of seal ring should be changed in time.
10. Maintenance should be done in non-hazardous location.
11. End users are not permitted to change any components inside.
12. When installation, use and maintenance of transmitter, observe following standards:
    GB3836.13-1997 "Electrical apparatus for explosive gas atmospheres Part 13: Repair and overhaul for apparatus used in explosive gas atmospheres"
    GB3836.15-2000 "Electrical apparatus for explosive gas atmospheres Part 15: Electrical installations in hazardous area (other than mines)"
    GB50257-1996 "Code for construction and acceptance of electric device for explosion atmospheres and fire hazard electrical equipment installation engineering"
    GB15577-1995 "Safe regulation for explosive dust atmospheres"
    GB12476.2-2006 "Electrical apparatus for use in the presence of combustible dust – Part 1-2: Electrical apparatus protected by enclosures and surface temperature limitation – Selection, installation and maintenance"

3051S-ERS: Ex ia IIC T4

Special Conditions for Safe Use (X):

1. Symbol "X" is used to denote specific conditions of use: For output code A and F: This apparatus is not capable of withstanding the 500 V r.m.s. insulation test required by Clause 6.4.12 of GB3836.4-2000.
2. The ambient temperature range is:

Output code	Ambient temperature
A	–50 °C ≤ T_a ≤ +70 °C
F	–50 °C ≤ T_a ≤ +60 °C

3. Intrinsically safe parameters:

Output code	Housing code	Display code	Maximum input voltage: U_i (V)	Maximum input current: I_i (mA)	Maximum input power: P_i (W)	Maximum internal parameters : C_i (nF)	Maximum internal parameters : L_i (uH)
A	=00	N/A	30	300	1	38	0
A	≠00	N/A	30	300	1	11.4	2.4
A	≠00	M7/M8 /M9	30	300	1	0	58.2
F	≠00	N/A	30	300	1.3	0	0
F FISCO	≠00	N/A	17.5	500	5.5	0	0

4. The product should be used with Ex-certified associated apparatus to establish explosion protection system that can be used in explosive gas atmospheres. Wiring and terminals should comply with the instruction manual of the product and associated apparatus.
5. The cable between this product and associated apparatus should be shielded cables (the cables must have insulated shield). The shield has to be grounded reliably in non-hazardous area.
6. The product complies to the requirements for FISCO field devices specified in IEC60079-27:2008. For the connection of an intrinsically safe circuit in accordance FISCO model, FISCO parameters of this product are as above.
7. End users are not permitted to change any components inside, but to settle the problem in conjunction with manufacturer to avoid damage to the product.

8. When installation, use and maintenance of this product, observe the following standards:

   GB3836.13-1997 “Electrical apparatus for explosive gas atmospheres Part 13: Repair and overhaul for apparatus used in explosive gas atmospheres”
   GB3836.15-2000 “Electrical apparatus for explosive gas atmospheres Part 15: Electrical installations in hazardous area (other than mines)”
   GB3836.16-2006 “Electrical apparatus for explosive gas atmospheres Part 16: Inspection and maintenance of electrical installation (other than mines)”
   GB50257-1996 “Code for construction and acceptance of electric device for explosion atmospheres and fire hazard electrical equipment installation engineering”

Rosemount 3051S and 3051SMV Wireless

Rev 2.3

European Directive Information

A copy of the EC Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EC Declaration of Conformity can be found at Emerson.com/Rosemount.

Telecommunication compliance

All wireless devices require certification to ensure that they adhere to regulations regarding the use of the RF spectrum. Nearly every country requires this type of product certification. Emerson is working with governmental agencies around the world to supply fully compliant products and remove the risk of violating country directives or laws governing wireless device usage.

FCC and IC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions: This device may not cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation. This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Installing Equipment in North America

The US National Electrical Code (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area Classification, gas, and temperature Class. This information is clearly defined in the respective codes.

USA

I5 USA Intrinsically Safe (IS), Nonincendive (NI), and Dust-Ignitionproof (DIP)
Certificate: 3027705
Standards: FM Class 3600 – 2011, FM Class 3610 – 2010, FM Class 3611 – 2004, FM Class 3810 – 2005, NEMA 250 –2003
Markings: IS CL I, DIV 1, GP A, B, C, D; CL II, DIV 1, GP E, F, G; CL III T4; CL 1, Zone 0 AEx ia IIC T4;NI CL 1, DIV 2, GP A, B, C, D T4;DIP CL II, DIV 1, GP E, F, G; CL III, T5;T4(–50 °C ≤ T_a ≤ +70 °C)/ T5(–50 °C ≤ T_a ≤ +85 °C); when connected per Rosemount drawing 03151-1000; Type 4X

Special Conditions for Safe Use (X):

1. The Model 3051S and SMV Wireless Transmitters shall only be used with the 701PBKKF Rosemount SmartPower Battery Pack or alternately the Perpetuum Intelligent Power Module Vibration Harvester.
2. The transmitter may contain more than 10% aluminum and is considered a potential risk of ignition by impact or friction.
3. The surface resistivity of the antenna is greater than 1GΩ. To avoid electrostatic charge build-up, it must not be rubbed or cleaned with solvents or a dry cloth.

Canada

I6 CSA Intrinsically Safe
Certificate: CSA 1143113
Standards: CAN/CSA C22.2 No. 0-10, CSA Std C22.2 No. 30-M1986, CAN/CSA C22.2 No. 94-M91, CSA Std C22.2 No. 142-M1987, CSA Std C22.2 No. 157-92, ANSI/ISA 12.27.01-2003, CSA Std C22.2 No. 60529:05
Markings: Intrinsically Safe Class I, Division 1; suitable for Class 1, Zone 0, IIC, T3C; when connected per Rosemount drawing 03151-1010; Type 4X

Europe

I1 ATEX Intrinsic Safety
Certificate: Baseefa13ATEX0127X
Standards: EN 60079-0: 2012, EN 60079-11: 2012
Markings: ⟨Ex⟩ II 1 G Ex ia IIC T4 Ga, T4(–60 °C ≤ T_a ≤ +70 °C)

Special Conditions for Safe Use (X):

1. The Model 3051S Wireless and Model 3051SMV Wireless enclosure may be made of aluminum alloy and given a protective polyurethane paint finish; however, care should be taken to protect it from impact or abrasion if located in a zone 0 area.
2. The surface resistivity of the antenna is greater than 1GΩ. To avoid electrostatic charge build-up, it must not be rubbed or cleaned with solvents or dry cloth.

International

I7 IECEx Intrinsic Safety
Certificate: IECEx BAS 13.0068X
Standards: IEC 60079-0: 2011, IEC 60079-11: 2011
Markings: Ex ia IIC T4 Ga, T4(–60 °C ≤ T_a ≤ +70 °C)

Special Conditions for Safe Use (X):

1. The Model 3051S Wireless and Model 3051SMV Wireless enclosure may be made of aluminum alloy and given a protective polyurethane paint finish; however, care should be taken to protect it from impact or abrasion if located in a zone 0 area.
2. The surface resistivity of the antenna is greater than 1GΩ. To avoid electrostatic charge build-up, it must not be rubbed or cleaned with solvents or dry cloth.

Brazil

I2 INMETRO Intrinsic Safety
Certificate: UL-BR 14.0760X
Standards: ABNT NBR IEC60079-0:2008, + Errata 1:2011, ABNT NBRIEC60079-11:2009,
Markings: Ex ia IIC T4 Ga,T4(–60 °C ≤ T_a ≤ +70 °C)

Special Condition for Safe Use (X):

1. See certificate.

China

I3 China Intrinsic Safety
Certificate: 3051S Wireless: GYJ161250X
3051SFx GYJ16.1465X [Flowmeters]
Standards: GB3836.1-2010, GB3836.4-2010, GB3836.20-2010
Markings: Ex ia IIC T4 Ga, T4 –60 ~ 70 °C

Special Condition for Safe Use (X):

1. See appropriate certificate.

Note
Not currently available on the Rosemount 3051S MultiVariable™ Wireless Transmitter.

Japan

I4 TIIS Intrinsically Safe
Certificate: TC18649,TC18650, TC18657
Markings: Ex ia IIC T4 (–20 ~ 60 °C)

Table 58. Process Temperature

Temperature class	Process temperature
T6	–60 to +65 °C
T5	–60 to +80 °C
T4	–60 to +120 °C

Special Conditions for Safe Use (X):

1. This device contains a thin wall diaphragm. Installation, maintenance and use shall take into account the environmental conditions to which the diaphragm will be subjected. The manufacturer's instructions for installation and maintenance shall be followed in detail to assure safety during its expected lifetime.
2. Flameproof joints are not intended for repair.
3. Non-standard paint options may cause risk from electrostatic discharge. Avoid installations that could cause electrostatic build-up on painted surfaces, and only clean the painted surfaces with a damp cloth. If paint is ordered through a special option code, contact the manufacturer for more information.
4. Some variants of the equipment have reduced markings on the nameplate. Refer to the Certificate for full equipment marking.

I1 ATEX Intrinsic Safety and Dust

Certificate: BAS97ATEX1089X; Baseefa11ATEX0275X

Standards: EN60079-0:2012, EN60079-11:2012, EN60079-31:2009

Certificate: GYJ14.1041X; GYJ15.1368X [Flowmeters]
Standards: GB12476-2000; GB3836.1-2010, GB3836.2-2010, GB3836.20-2010
Markings: Ex d IIC T6/T5 Ga/Gb, T6(–50 °C ≤ T_a ≤ +65 °C), T5(–50 °C ≤ T_a ≤ +80 °C)

Special Conditions for Safe Use (X):

1. The relation between ambient temperature arrange and temperature class is as follows:

T_a	Temperature class
–50 °C~ +80 °C	T5
–50 °C~ +65 °C	T6

When used in a combustible dust environment, the maximum ambient temperature is 80 °C.

2. The earth connection facility in the enclosure should be connected reliably.
3. Cable entry certified by notified body with type of protection Ex d IIC in accordance with GB3836.1-2000 and GB3836.2-2000, should be applied when installed in a hazardous location. When used in combustible dust environment, cable entry in accordance with IP66 or higher level should be applied.
4. Obey the warning "Keep tight when the circuit is alive."
5. End users are not permitted to change any internal components.
6. During installation, use and maintenance of this product, observe the following standards: GB3836.13-1997, GB3836.15-2000, GB3836.16-2006, GB50257-1996, GB12476.2-2006, GB15577-2007

I3 China Intrinsic Safety
Certificate: GYJ13.1362X; GYJ15.1367X [Flowmeters]
Standards: GB3836.1-2010, GB3836.4-2010, GB3836.20-2010, GB12476.1-2000
Markings: Ex ia IIC Ga T4/T5

Special Conditions for Safe Use (X):

1. Symbol "X" is used to denote specific conditions of use:
   a. If the apparatus is fitted with an optional 90 V transient suppressor, it is not capable of withstanding the 500 V insulation test for one minute. This must be taken into account when installing the apparatus.
   b. The enclosure may be made of aluminum alloy and given a protective polyurethane paint finish; however, care should be taken to protect it from impact or abrasion if located in Zone 0.
2. The relation between T code and ambient temperature range is:

Model	T code	Temperature range
HART	T5	–60 °C ≤ T_a ≤ +40 °C
HART	T4	–60 °C ≤ T_a ≤ +70 °C
Fieldbus/PROFIBUS/ FISCO	T4	–60 °C ≤ T_a ≤ +60 °C

3. Intrinsically Safe parameters:

Parameter	HART	Fieldbus/ PROFIBUS	FISCO
Voltage U_i	30 V	30 V	17.5 V
Current I_i	200 mA	300 mA	380 mA
Power P_i	0.9 W	1.3 W	5.32 W
Capacitance C_i	0.012 μF	0 μF	<5 nF
Inductance L_i	0 mH	0 mH	<10 μH

Note
FISCO parameters apply to both Group IIC and IIB.

[For Flowmeters] When Rosemount 644 Temperature Transmitter is used, the Rosemount 644 Transmitter should be used with Ex-certified associated apparatus to establish explosion protection system that can be used in explosive gas atmospheres. Wiring and terminals should comply with the instruction manual of both Rosemount 644 Transmitter and associated apparatus. The cables between Rosemount 644 Transmitter and associated apparatus should be shielded cables (the cables must have insulated shield). The shielded cable has to be grounded reliably in a non-hazardous area.

4. Transmitters comply with the requirements for FISCO field devices specified in IEC60079-27:2008. For the connection of an intrinsically safe circuit in accordance with FISCO Model, FISCO parameters are listed in Table 65 on page 156.
5. The product should be used with Ex-certified associated apparatus to establish explosion protection system that can be used in explosive gas atmospheres. Wiring and terminals should comply with the instruction manual of the product and associated apparatus.
6. The cables between this product and associated apparatus should be shielded cables (the cables must have insulated shield). The shielded cable has to be grounded reliably in a non-hazardous area.
7. End users are not permitted to change any intern components but to settle the problem in conjunction with the manufacturer to avoid damage to the product.
8. During installation, use and maintenance of this product, observe the following standards: GB3836.13-1997, GB3836.15-2000, GB3836.16-2006, GB50257-1996, GB12476.2-2006, GB15577-2007

T4	–60 °C to +120 °C	–60 °C to +80 °C

Specific Condition of Use:

Special Conditions for Safe Use (X):

1. Appropriate cable, glands and plugs need to be suitable for a temperature of 5 °C greater than maximum specified temperature for location where installed.
2. Non- standard paint options may cause risk from electrostatic discharge. Avoid installations that could cause electrostatic build-up on painted surfaces, and only clean the painted surfaces with a damp cloth. If paint is ordered through a special option code, contact the manufacturer for more information.
3. The device contains a thin wall diaphragm less than 1 mm thickness that forms a boundary between zone 0 (process connection) and zone 1 (all other parts of the equipment). The model code and datasheet are to be consulted for details of the diaphragm material. Installation, maintenance and use shall take into account the environmental conditions to which the diaphragm shall be subjected. The manufacturer's instructions for installation and maintenance shall be followed in detail to assure safety during its expected lifetime.
4. Flameproof joints are not intended for repair.

Certificate: GYJ13.1386X
Standards: GB3836.1-2010, GB3836.2-2010
Markings: Pressure Transmitter: Ex d IIC Gb,
T6(–50 °C ≤ Ta ≤ +65 °C),
T5(–50 °C ≤ Ta ≤ +80 °C)

Special Conditions for Safe Use (X):

1. Symbol “X” is used to denote specific conditions of use:
   a. The Ex d blanking elements, cable glands, and wiring shall be suitable for a temperature of 90 °C.
   b. This device contains a thin wall diaphragm. Installation, maintenance and use shall take into account the environment conditions to which the diaphragm will be subjected.
2. The relation between T code and ambient temperature range is:

T_a	Temperature class
–50 °C ≤ Ta ≤ +80 °C	T5
–50 °C ≤ Ta ≤ +65 °C	T6

3. The earth connection facility in the enclosure should be connected reliably.
4. During installation, use and maintenance of the product, observe the warning “Don’t open the cover when the circuit is alive.”
5. During installation, there should be no mixture harmful to flameproof housing.
6. Cable entry and conduit, certified by NEPSI with type of protection Ex d IIC and appropriate thread form, should be applied when installed in a hazardous location. Blanking elements should be used on the redundant cable entries.

7. End users are not permitted to change any internal components, but to settle the problem in conjunction with the manufacturer to avoid damage to the product.
8. Maintenance should be done in a non-hazardous location.
9. During installation, use and maintenance of this product, observe the following standards: GB3836.13-2013, GB3836.15-2000, GB3836.16-2006, GB50257-2014

I3 China Intrinsic Safety
Certificate: GYJ12.1295X
Standards: GB3836.1-2010, GB3836.4-2010, GB3836.20-2010
Markings: Ex ia IIC Ga, T6(–60 °C ≤ Ta ≤ +70 °C)

Special Conditions for Safe Use (X):

1. Symbol "X" is used to denote specific conditions of use:
   a. If the apparatus is fitted with an optional 90 V transient suppressor, it is not capable of withstanding the 500 V insulation test for one minute. This must be taken into account when installing the apparatus.
   b. The enclosure may be made of aluminum alloy and given a protective polyurethane paint finish; however, care should be taken to protect it from impact or abrasion if located in Zone 0.
2. The relation between T code and ambient temperature range is:

Model	T Code	Temperature range
HART, Fieldbus, PROFIBUS, and Low Power	T4	–60 °C ≤ T_a ≤ +70 °C

3. Intrinsically safe parameters:

	HART	Fieldbus/ PROFIBUS	FISCO
Voltage U_i	30 V	30 V	17.5 V
Current I_i	200 mA	300 mA	380 mA
Power P_i	1 W	1.3 W	5.32 W
Capacitance C_i	0.012 µF	0 µF	0 nF
Inductance L_i	0 mH	0 mH	0 µF

Note
FISCO parameters comply with the requirements for FISCO field devices in GB3836.19-2010.

[For Flowmeters] When 644 temperature transmitter is used, the 644 temperature transmitter should be used with Ex-certified associated apparatus to establish explosion protection system that can be used in explosive gas atmospheres. Wiring and terminals should comply with the instruction manual of both 644 temperature transmitter and associated apparatus. The cables between 644 temperatures transmitter and associated apparatus should be shielded cables (the cables must have insulated shield). The shielded cable has to be grounded reliably in a non-hazardous area.

4. The product should be used with Ex-certified associated apparatus to establish explosion protection system that can be used in explosive gas atmospheres. Wiring and terminals should comply with the instruction manual of the product and associated apparatus.
5. The cables between this product and associated apparatus should be shielded cables (the cables must have insulated shield). The shielded cable has to be grounded reliably in a non-hazardous area.
6. End users are not permitted to change any internal components, and needs to settle the problem in conjunction with the manufacturer to avoid damage to the product.
7. During installation, use and maintenance of this product, observe the following standards: GB3836.13-2013, GB3836.15-2000, GB3836.16-2006, GB3836.18-2010, GB50257-2014.

Additional Certifications

SBS American Bureau of Shipping (ABS) Type Approval

Certificate: 09-HS446883B-3-PDA

Intended Use: Marine and Offshore Applications Measurement of either Gauge or Absolute Pressure for Liquid, Gas, and Vapor.

ABS Rules: 2013 Steel Vessels Rules 1-1-4/7.7, 1-1-Appendix 3, 4-8-3/1.7, 4-8-3/13.1

SBV Bureau Veritas (BV) Type Approval

Certificate: 23157/B0 BV

BV Rules: Bureau Veritas Rules for the Classification of Steel Ships

Application: Class notations: AUT-UMS, AUT-CCS, AUT-PORT and AUT-IMS; Pressure transmitter type 2051 cannot be installed on diesel engines.

SDN Det Norske Veritas (DNV) Type Approval

Certificate: TAA000004F

Intended Use: DNV GL Rules for Classification -Ships and offshore units

Application:

Location classes	
Type	2051
Temperature	D
Humidity	B
Vibration	A
EMC	B
Enclosure	D

SLL Lloyds Register (LR) Type Approval

Certificate: 11/60002

Application: Environmental categories ENV1, ENV2, ENV3 and ENV5

Rosemount 3051 Wireless

Rev 1.4

European Directive Information

A copy of the EU Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU Declaration of Conformity can be found at Emerson.com/Rosemount.

Telecommunication compliance

All wireless devices require certification to ensure that they adhere to regulations regarding the use of the RF spectrum. Nearly every country requires this type of product certification. Emerson is working with governmental agencies around the world to supply fully compliant products and remove the risk of violating country directives or laws governing wireless device usage.

FCC and IC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions: This device may not cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation. This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Installing in North America

The US National Electrical Code (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

USA

I5 U.S.A. Intrinsically Safe (IS)
Range 1–5
Certificate: FM 3046325

Nominal pipe size	ANSI Class	Overall length "A" in. (mm)	Upper to centerline height "B" in (mm)	Bolt circle diameter "C" in. (mm)	Outside diameter "D" in. (mm)	Bolt hole diameter "E" in. (mm)	Flange thickness "F" in. (mm)	Weight lb (kg)
1-in.	150	7.00 (178)	2.40 (61)	3.12 (79)	4.25 (108)	0.62 (16)	0.50 (13)	11.80 (5,31)
2-in.		9.00 (229)	3.31 (84)	4.75 (121)	6.00 (152)	0.75 (19)	0.69 (18)	23.66 (10,73)
3-in.		11.00 (279)	3.61 (92)	6.00 (152)	7.50 (191)	0.75 (19)	0.88 (22)	29.08 (13,09)

Table 105. Capillary and Support Tube Weights Measured per Foot (.30 m) of Capillary

Part	Weight lb (kg)
0.03-in. ID, SST armor	0.095 (0,043)
0.04-in. ID, SST armor	0.091 (0,041)
0.075-in. ID, SST armor	0.100 (0,045)
0.03-in. ID, PVC armor	0.105 (0,048)
0.04-in. ID, PVC armor	0.100 (0,045)
0.075-in. ID, PVC armor	0.110 (0,050)
Capillary adapter	0.085 (0,039)
2-in. support tube	0.035 (0,016)
4-in. support tube	0.090 (0,041)
