

General Specifications

EJX510B and EJX530B
Absolute and Gauge Pressure
Transmitters

GS 01C27F01-01EN

The high performance absolute and gauge pressure transmitters EJX510B and EJX530B feature single crystal silicon resonant sensor and are suitable to measure liquid, gas, or steam pressure. EJX510B and EJX530B transmit not only process variables but also the setting parameters using wireless signal. The transmitters run on internal batteries, and the installation cost can be decreased since hard-wiring is not required. The communication is compliant with ISA100.11a protocol specifications.

The "►" marks indicates the most typical selection for each specification. Example: EJX530B-LAS4N-07JNN/□.

*1: Hastelloy C-276 or ASTM N10276.

*2: Not applicable for combination of capsule code **D** and wetted parts material code **H**. Threads are based on the withdrawn DIN 16 288.

*3: ⚠ Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids.
Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

*4: Order the antenna separately from accessory option.

*5: Remote antenna cables can be attached. Order separately from accessory option.

The '#' marks indicate the construction materials conform to NACE material recommendations per MR0175/ISO15156.

Please refer to the latest standards for details. Selected materials also conform to NACE MR0103.
